

1 9 9 2

It all started with a dream. It started in a tinkerer's garage. It started with a little boy and a bent bicycle fork. It started when chromet moly. It started with a whole new way of looking at things...

**It all started  
with a Redline.**

72

Redline Engineering is founded to custom-build exotic racing frames for motorcycles.

74

Redline fabricates a set of tubular chromoly forks to combat the glut of bent and broken forks on kids' bicycles. The first Redline standard is set.

75

Redline begins mass producing frames and forks for the BMX world.

# RACE ISSUE.

## RL720

### Out in front.

You'll find Redline's pro racing heritage in every detail of this quintessential Redline Racer. It starts with tapered forks and a stretch-limo frame. It continues with ultra-strong and light Redline Aeromaster rims and tires, Forklifter handlebar and 6-bolt Stealth Stem. It stops with the best brakes and lever available—Odyssey Pitbull. Out of the box to the finish line—the only pro-racing component not included is you.

All Chrome, Solar/Carbon/Chrome,  
Rio/Carbon/Chrome,  
AirWest/Chrome

Team Redline

## MR120

### The speed of light.

When it comes to speed, even the youngest pros come to Redline. Slippery quick, the MR 120 is designed for riders under 100 lbs. Thin-walled chromoly tubing with gussetting at the head tube for light weight and strength. Anatomically sized alloy Sugino cranks, an alloy mini stem and bars, 1 1/4" rims and sealed tech hubs.

All Chrome

Shown with optional Flight Cranks

320/All Snow

420/Solar/JetStream

## RL 520

### A vicious racing machine.

Point the RL 520 toward the finish line and hang on. All chromoly fork and extra-long tri-moly frame are only the beginning. A Redline Pro Bar, Araya 7X rims, genuine Dia Compe brake, chromoly seat post and RL saddle complete the picture. Tenaciously tough and quick-witted, to take you to the top.

All Chrome, Solar/Carbon, Rio/Carbon, AirWest

## RL 420

### Jeckell & Hyde.

Designed for the track but at home on the streets, either way you can't lose with the RL 420. Chromoly tubes in the frame and fork for durability, Araya alloy hoops for strength and speed, chromoly pedals for power. The RL 420 is built tough to take it—wherever it takes you.

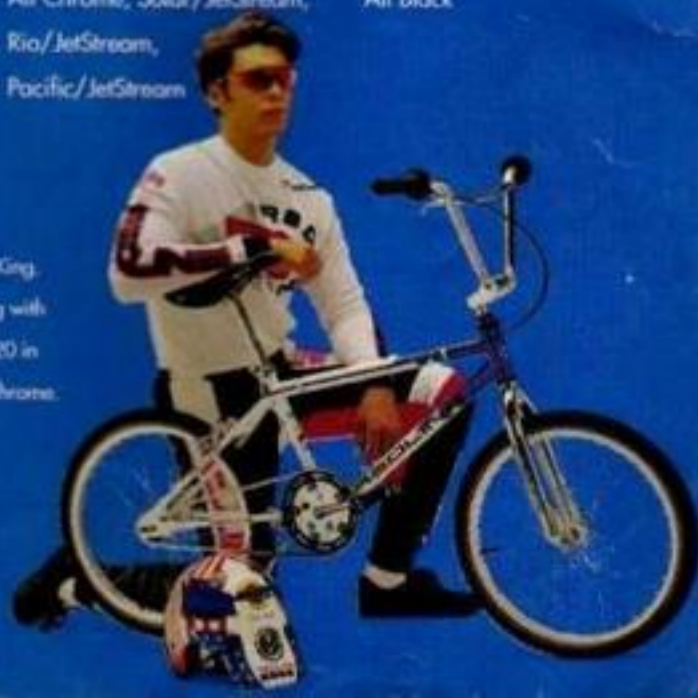

All Chrome, Solar/JetStream, Rio/JetStream, Pacific/JetStream

## RL 320

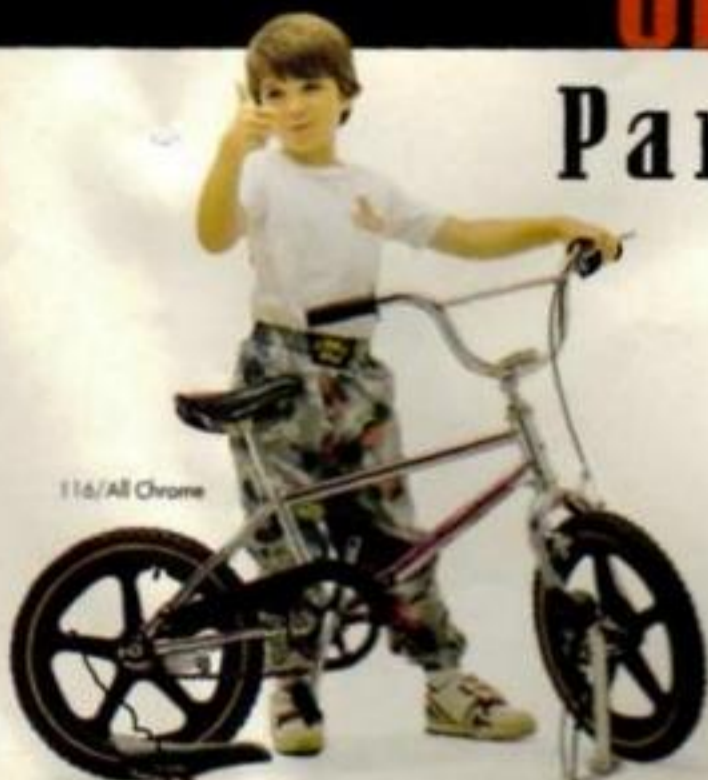

### State-of-the-street.

The RL 320 gets you off to a great start in the Redline line, for a little more than you'd pay for a department store bike. Built beefy and bold, with a gusseted head tube, chromoly pedals and genuine 4-bolt Stealth stem. (Also available with coaster brakes.) All Chrome, All Rio, All Snow, All Black

Fit for a King.

## Parts &amp; Accessories

116/All Chrome

220/Neo-Green/Black

620/Neo-Pink/Black

**NEW RL Titanium Seat Post**

As strong as chromoly, but 40% lighter. Laid back or straight.

**NEW RL Flight Control Pedal**

Forged aircraft aluminum with sealed bearings.

**NEW RL Sealed Bearing Hub**

Finally a hub good enough to be called a Redline.

**RL Flights**

Often imitated, never duplicated.

**Flight Chainwheel**

The only chainring for Flight Cranks. Tooth sizes 39-46.

**RL Stealth Pro Stem**

Ultra sleek, ultra strong. Six bolt construction assures bars won't slip.

**RL Pro Grip**

Made in USA, with embossed RL logo. Comfortable, durable.

**RL Pro Seat Clamp**

Twice the clamping power.

**RL Logo Tires**

High pressure with super sticky tread pattern.

**RL Aeromaster Rim**

Narrow profile, aluminum alloy. Light as a 1.5 with the strength of a 1.75 rim.

**RL Flight Control Bar**

Legendary Redline quality at an affordable price.

**RL Forklifter Handlebar**

4-piece design for ultra strength and special knurling for no slip.

**RL Flight Sealed Bottom Bracket Set**

Made for use with RL Flight Cranks. Smooth rolling and maintenance free.

**RL Pro Seat Post**

100% chromoly. Laid back or straight.

**RL 420 Frame Set**

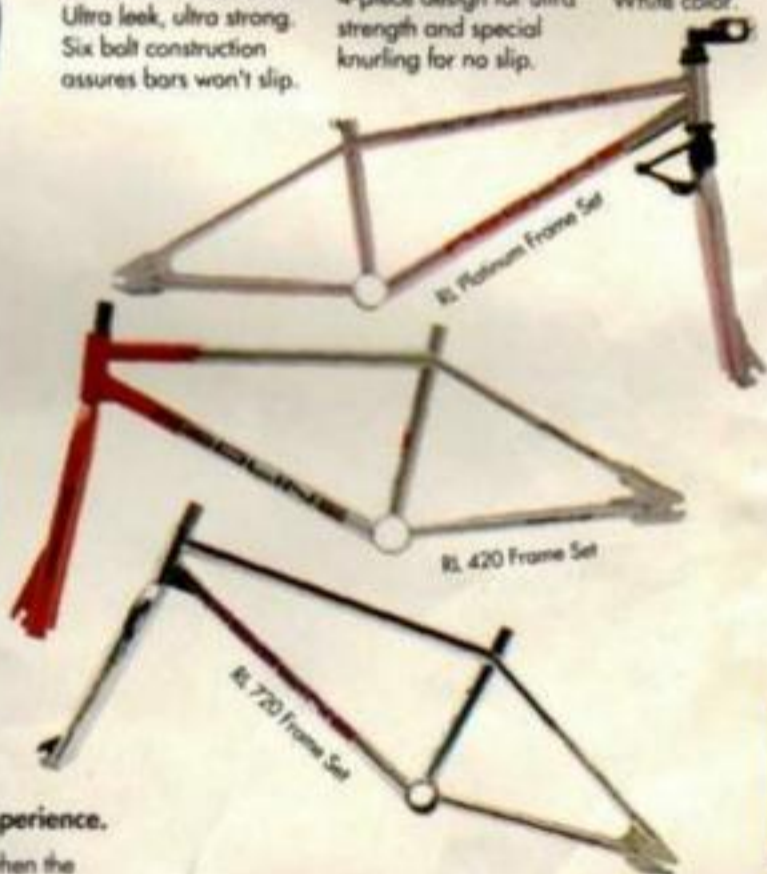

For the starting racer. Chromoly tubes for extra strength.

**RL 720 Frame Set**

Legendary pro-line BMX chromoly racing frame. Stretch-limo XL. Over-size tubes, tapered chromoly fork.

**MR 120 Frame Set**

RL designed, mini-pro size. Over-sized tubes, chromoly fork. Flight White color.

**RL 116****The beginning Redline.**

Start here and you'll be on the way to the finish line in no time. Tuff wheels mean Mom and Dad won't be on a first-name basis with the local bike repairman. Gussets on the frame and a 4-bolt stem make this a bike that can be handed down through the family.

All Chrome, Solar/JetStream, Rio/JetStream

**RL 220****Streetstyle starter.**

Just starting out? The RL220 has chromoly frame and fork tubes along with 48-spoke Araya rims and Odyssey Rotor brakes so you can start out in style.

Neo-Pink/Black; Neo-Green/Black, Snow/Black

**RL 620****An air-raising experience.**

Redline was there when the first road warrior blasted into hyperspace. And we're here still, with the 1992 RL 620. It's light on the lift-off, courageously strong when you hit the ground. It's got a tri-moly frame & fork, Odyssey rotor & brakes, and Suzue 48-hole sealed tech hubs. Neo-Pink/Black, Neo-Green/Black, Snow/Black

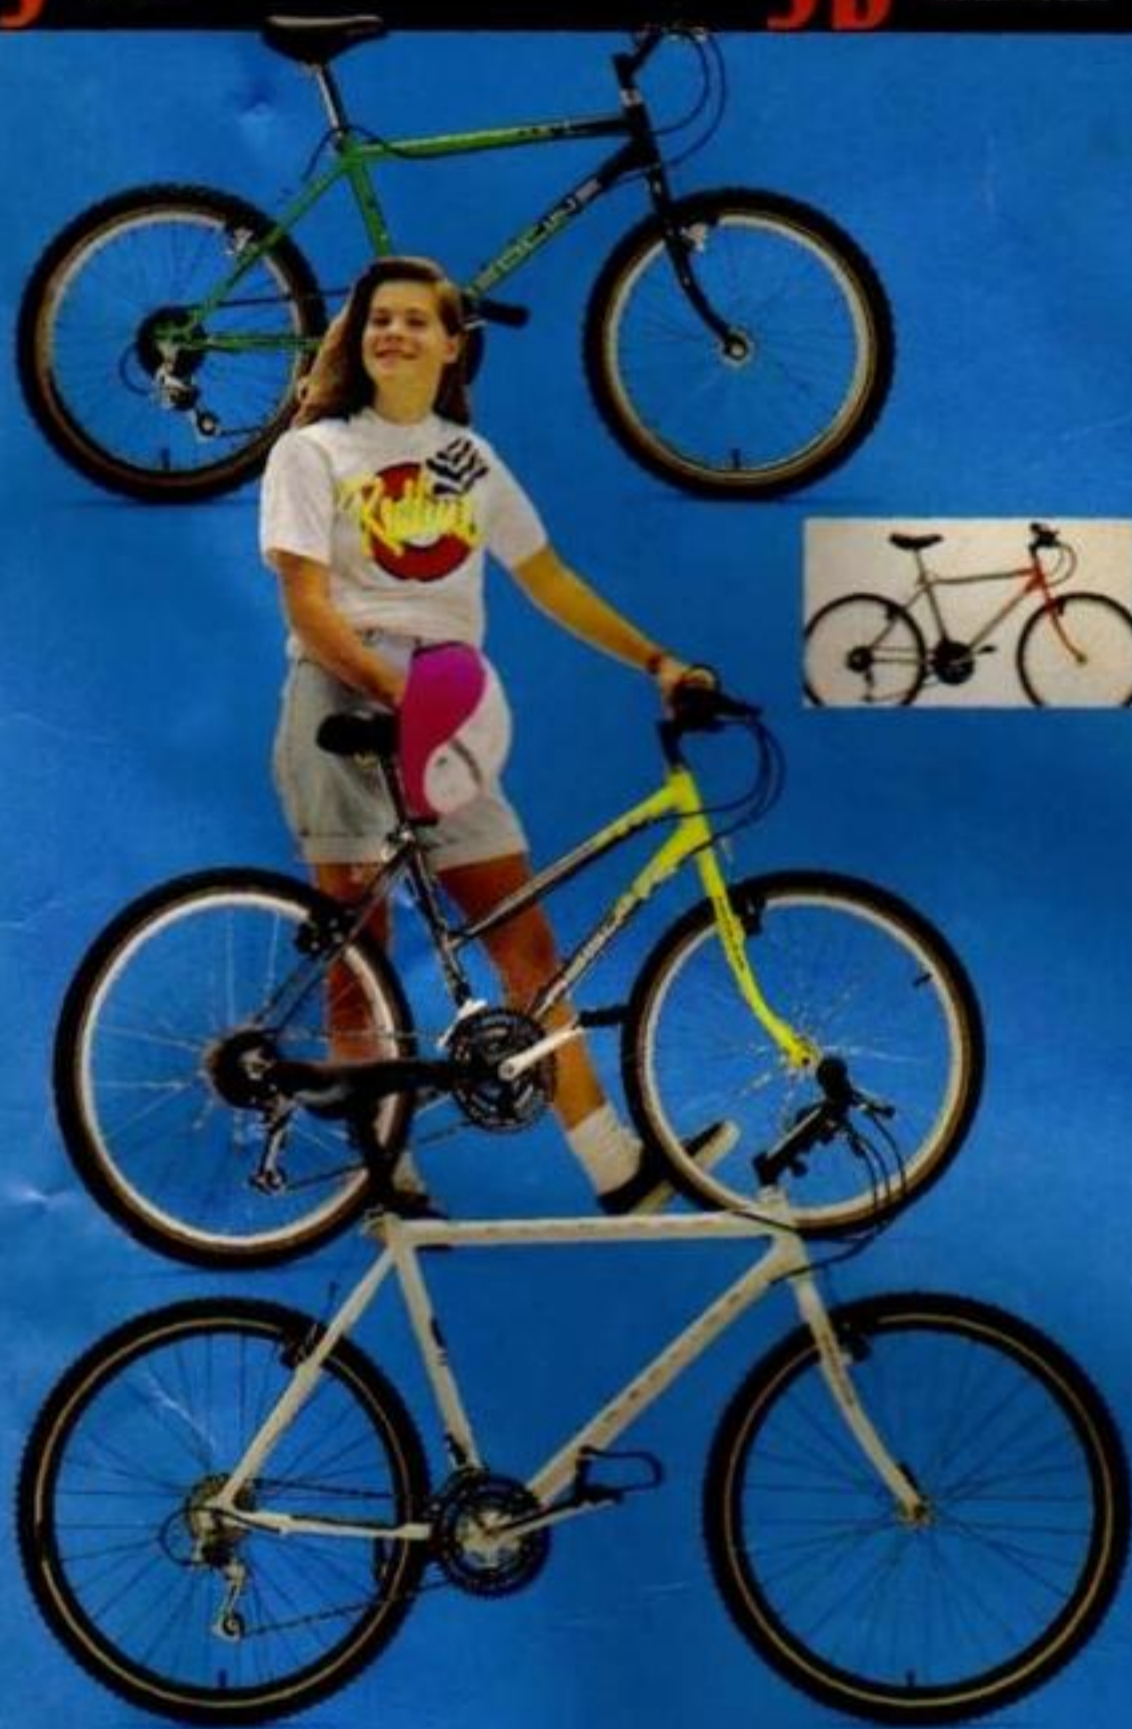

83

Freestyle goes legit when Redline introduces the RL-20, its first streetstyer.

84

A new name in BMX vocabulary: Forklifer. Still the standard handlebars.

## Rocky Top

Best of both worlds.

Cross the popular RL 320 with a mountain bike and what do you get? The Rocky Top. Gusseted frame, cantilever brakes and foot-proof index shifting gives this road-ready bike versatile durability. Other "real mountain bike" features include a quick release seat post and water bottle braze-ons for longer rides.

Neo-Red/Black, Neo-Green/Black

## Rocky Top II

Rise above average.

You don't have to be big to climb high mountains. For you, there's the Rocky Top II. Full 18-speed Suntour AccuShift index 18-speed shifting is combined with front quick release alloy rims and Dia Comp Cantilever Brakes, so it's easy to accelerate and even easier to stop. This durable bike is gusseted for strength. Boys and girls models, 24" wheel, 14.5" frame size.

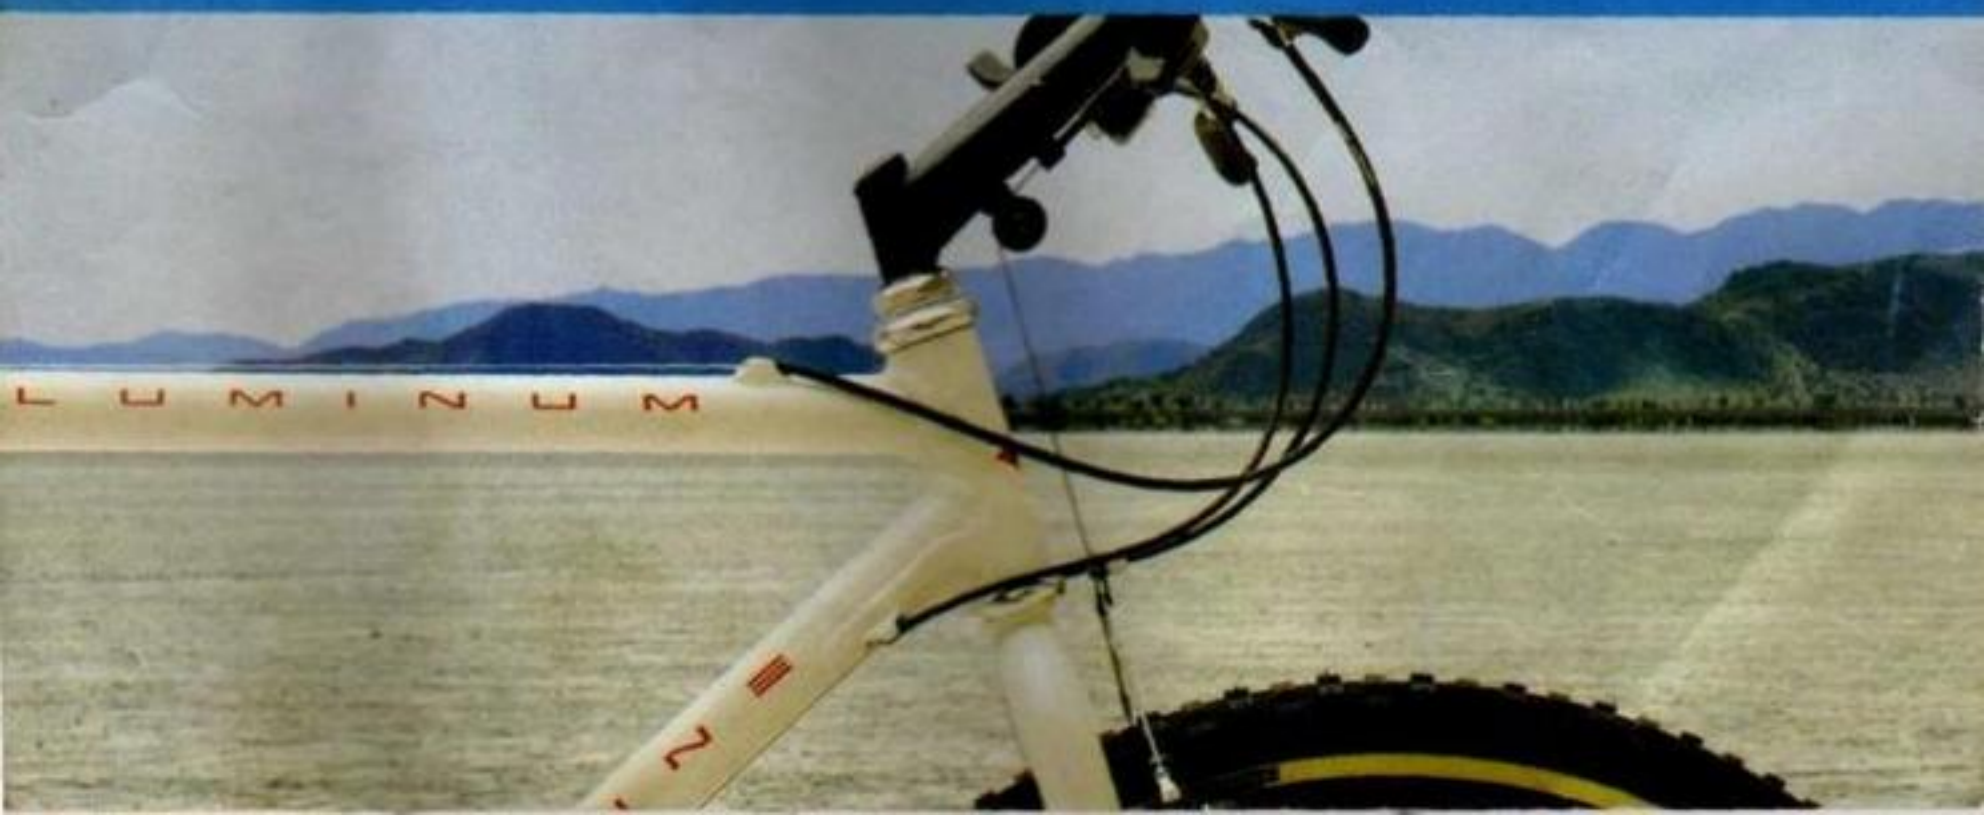

Neo-Red/Light Carbon, Neo-Yellow/Light Carbon

## Conquest 60AL

Take it to the limit.

The same tested frame geometry, the same Redline quality, but now of featherlight, tig-welded 7000 Series aluminum and a Trange chromoly fork. Ready to race out of the box, outfitted with Suntour XC Comp 21-speed drive train, Fisher Fat Tire tires, and a maintenance-free sealed bottom bracket. Ounce for ounce, the Redline 60AL is the one to take when you're taking it to the limit. (Also available as frame and fork only.)

Flight White

91

The Redline Flight Group expands its full line of accessories, including pedals of aircraft-grade aluminum, hubs and ATB Flight Cranks.

92

The Redline Platinum Limited Edition Bicycles are handcrafted for a select few. Everything you'd expect from everything that's come before.

## Frame Sets

### The power of choice.

Now, the choice is yours. Are you a climber—up and down hills constantly? Then you'll want the light weight of the 60AL aluminum frame and fork set. Or, are you more likely to get down and dirty, trafficking in the mud and muck? The RL 45 frame and fork set features a Paraplex frame design that elevates the chain stay for maximum clearance. Then again, if you prefer to be kept in suspense, you may want to aspire to the RL Platinum frame and fork, featuring the exclusive Browning Hydro-Pneumatic Suspension system. All come with head set, stem and the RL Lifetime Warranty. The 60AL and RL 45 also include sealed bottom brackets and seat posts. With Redline, have it your way.

## ATB Flight Cranks

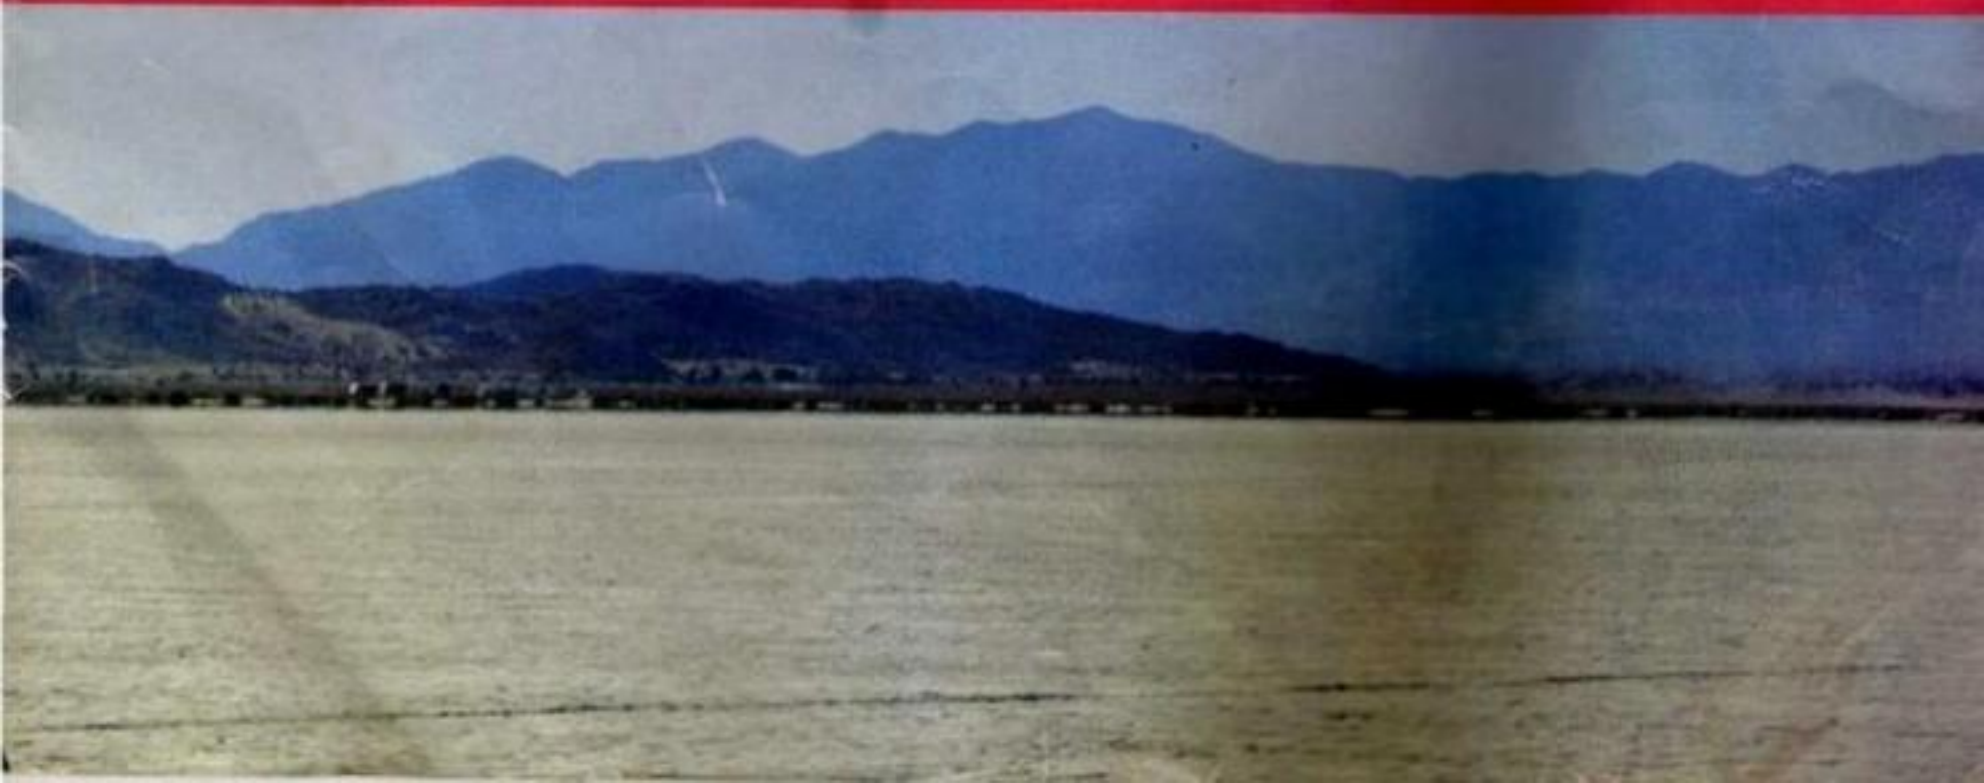

At last. The Flight Cranks that changed the BMX world, now available for mountain bikes. Exclusive oil-soaked roller bearing bottom bracket system keeps the bearings lubricated in all kinds of dirt, water, and mud. Set includes bottom bracket set, arms, tools—everything you need except chainrings. Sizes: 102/118.5 mm.

## Suspension System

### At last. A suspension system good enough for Redline.

Ever wonder how the Concorde can land smoothly after descending 50,000 feet from the ionosphere? The secret is a hinged nose link and nitrogen gas charged, hydro pneumatic shock system. Now that same system can be found as standard equipment on Redline Platinum Limited Edition Bicycles. In a major advance over previous systems, the Browning system allows not just adjustments, but easy two-finger damper valve control. The Soft setting provides an additional 200% bump absorption, while Lock Out effectively shuts the suspension system off for sprinting or up-hill rides. It is one half pound lighter and has half the moving parts as other suspension systems. What's more, it is completely maintenance free—no air pressure to adjust, no oil to change.

## 20th Anniversary Limited Editions

The culmination of 20 years of Redline innovation and excellence has been poured into two very special bicycles. Bicycles of such uncompromising style and time-honored quality, we can only handcraft a very limited number. American-made, both feature the ultimate in suspension systems, designed after those used in aircraft landing gear. The fit and finish are sublime. The Metaphor Color is certain to turn heads. One thing is for sure, if you miss out now, it may be at least twenty years before you can get another like these.

### Platinum ATB Frame and Fork.

If you appreciate the type of quality and style that only comes around once every twenty years or so, you've probably got a pretty strong feeling about what components match your style. No matter which componentry you choose, with the Redline Platinum as your foundation, you can't go wrong.

### Platinum BMX.

The Redline Platinum BMX Bicycle is not for everyone. Only a few will be able to ride what could well be the BMX Bike of the decade. It starts with the revolutionary Browning Hydro-Pneumatic Fork System. But it doesn't stop there. From start to finish, there is none more complete. (Available outfitted with premiere Redline components, or as a frame set only.)

Specifications subject to change without notice.

Availability may be limited.

C.P.S.C. equipment included but may not be shown.
