YETI A.R.C.

WHETHER YOU ARE A WORLD CLASS RACER, THE TERROR OF THE SPORT CLASS, OR A HARDCORE ENTHUSIAST, YETI BUILDS EACH AND EVERY ONE OF OUR FRAMES AS THOUGH YOU WERE A MEMBER OF OUR WORLD CHAMPIONSHIP WINNING, FACTORY RACE TEAM. WE DO NOT COMPROMISE QUALITY MATERIALS OR HANDMADE CRAFTSMANSHIP TO BUILD LESS EXPENSIVE FRAMES PRICED FOR THE MASSES. INSTEAD, WE USE YETI SPECIFIED CUSTOM-DRAWN TUBING, PRECISION MACHINING, AND COMPUTER-CONTROLLED TUBE BENDING TO CONSTRUCT WHAT WE BELIEVE ARE THE FINEST FRAMESETS AVAILABLE. AT YETI WE DON'T BUILD REPLICAS AND WE DON'T QUIT WHEN THE OTHERS GO HOME.

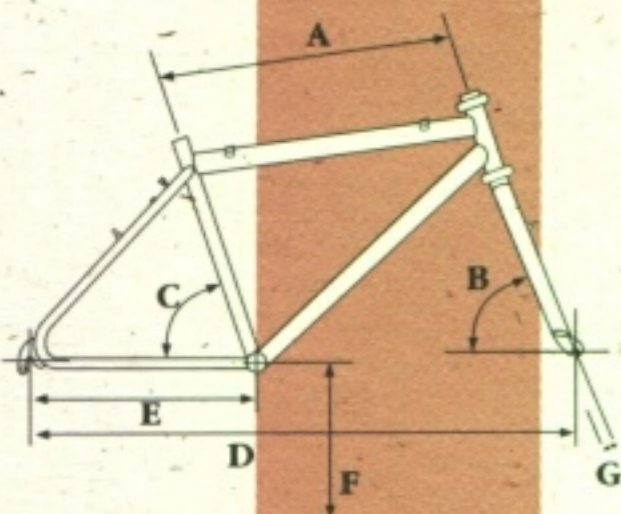

BE PROUD OF YOUR PRO.F.R.O.

All YETI bicycles are handmade in Durango, Colorado by an eccentric crew of passionate craftsmen. And this is not strictly a bunch of tech weenies, they also eat dirt!

YETI "Pro For Racing Only"

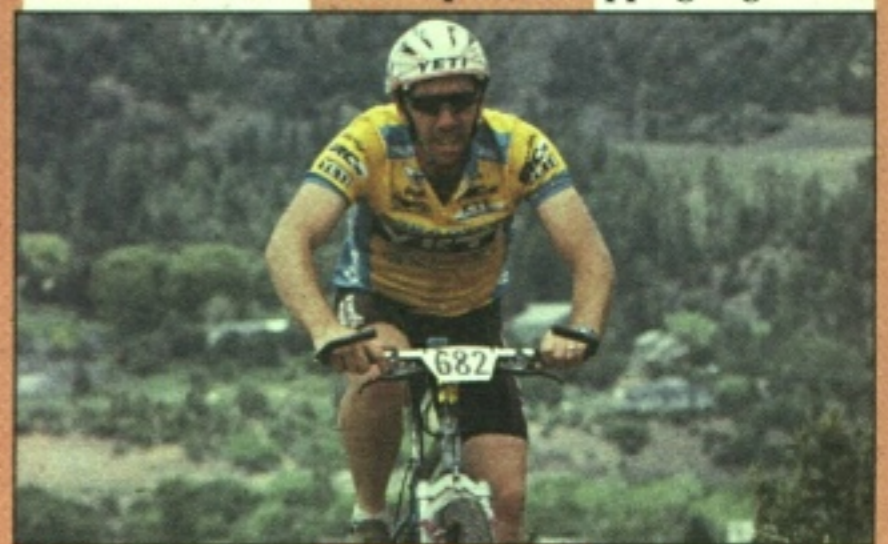

The Yeti Pro F.R.O. is our benchmark frame design, the latest in a series of progressively innovative Yeti racing framesets. The Yeti Pro F.R.O. has been through seven years of changes and continues to improve, while still remaining one of the most stable and predictable chromoly frames on the handmade market. It is constructed of a Yeti-designed, seamless, double-butted, chromoly tubeset from Tange, which allowed us to shave a full half pound from the frame. The Pro F.R.O. has traditional Yeti features including racer-friendly geometry, Yeti-cross cable routing and a one-piece computer-bent tail section with ample tire clearance. In a world of exotic materials and custom framesets that cost as much as your first car, Yeti has chosen to keep a frame in our line-up that not only satisfies your every handling dream, but is also considerate of your bank account. Some say nothing rides like steel, we say nothing rides like a Yeti.

Jimmy Deaton, three-time Mammoth Mountain Kamikazi Downhill Champion & Shipping Engineer.

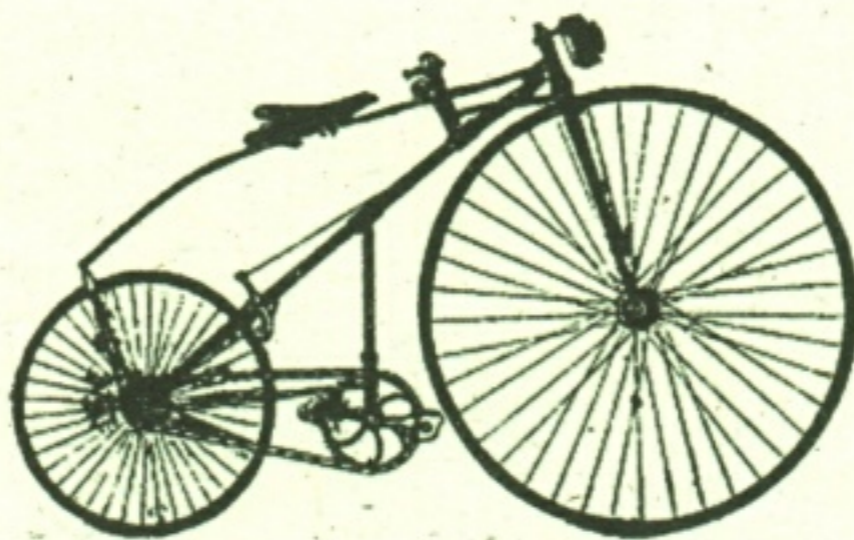

Frank Wadelton, Welder Extraordinaire and Manic Downhill Master.

Heath Franklin, Dual Slalom Specialist and Disciple to F.T.W.

When man first rode the earth the elevated bike was the obvious choice for maximum tire clearance.

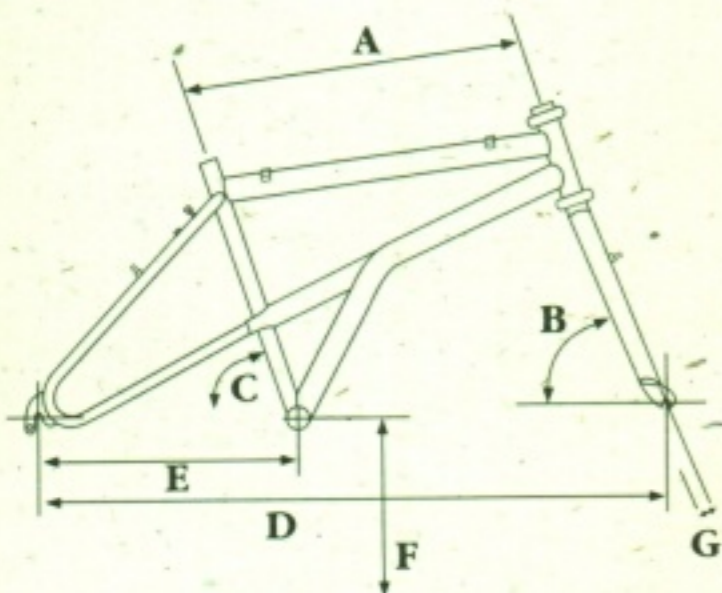

By the 1800s man introduced chain drive and realized that chain suck was an unacceptable phenomenon.

ALWAYS DISMOUNT FOR HORSES

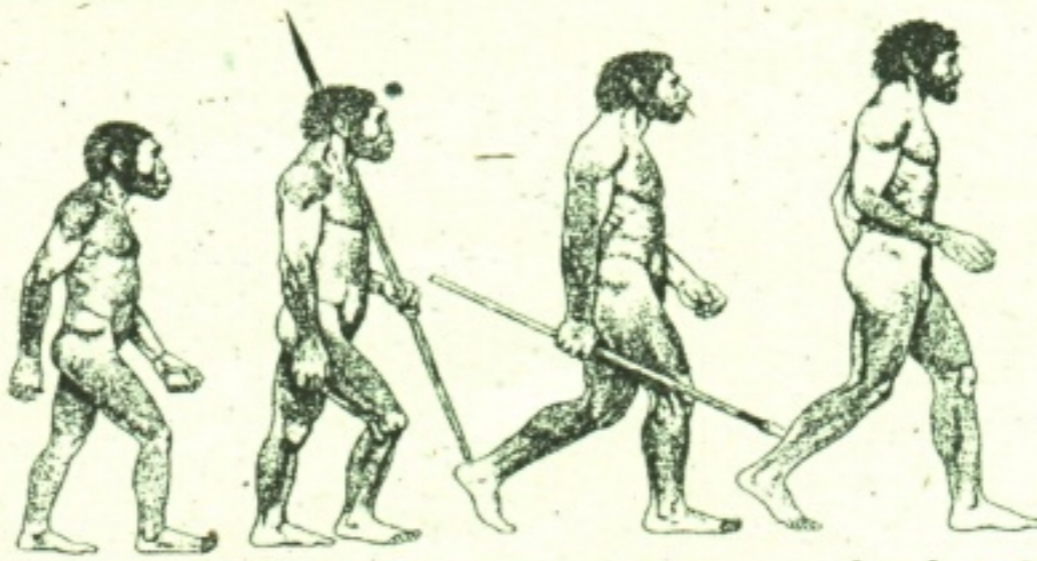

YETI Ultimate

Originally built as a project bike for **Mountain Bike Action Magazine**, this bike has gone on to become the most widely copied design in the industry. Although the imitations are flattering, the project bike was not perfect. Yeti has taken the necessary extra steps to bring the elevated design into the winner's circle. The addition of a computer-bent tail section and down tube has added strength and rigidity where it is needed; there's no chain suck or swaying bottom brackets here. Standard Yeti-cross cable routing and generous tire clearance round out the entire package. Whether you are bombing down the gnarliest, most mind-twisting single tracks or grunting up the steepest, most technical climbs on race courses throughout the world, the Yeti Ultimate will elevate you to the top.

WHEN I FIRST DISCOVERED MY THEORY OF EVOLUTION I TALKED TO JOHN AND THE BOYS AT YETI AND KNEW THEY COULD DO WONDERS.

CRAZED WELDER

BUILDS 1st A.R.C.

YETI A.R.C. "Alloy Racing Composites"

In keeping with our usual fanatic fashion, Yeti and our factory race team spent a full year researching, designing, and racing on the A.R.C. prior to releasing this frame to the public in the beginning of '92. In its first year of production the Yeti A.R.C. won more NORBA National, Grundig Cup and World Cup events than all of the competition combined. You won't find the harsh, buckboard ride of typical straight-gauge, 6000 series Aluminum in our flagship! The A.R.C. is masterfully constructed of Easton's 7005 Series ProGram Varilite tubing throughout the entire frame. Yeti called upon the wizardry of Easton Aluminum's Chuck Teixeira to draw an exclusive tubeset to our exacting requirements, which actually yielded a tube that is 25 percent stiffer and lighter than chromoly. We put the material where it matters, and the racers where they belong: on the podium.

YETI A.R.C.-A.S. "Active Suspension"

Yeti isn't introducing rear suspension because it's "the thing to do." We are taking full advantage of our relationship with world class motocross racers and their sophisticated motorcycle suspensions, to refine what other manufacturers are choosing to call "rear suspension". The Yeti A.R.C.-A.S. is built around the same race-proven geometry and material with which our original A.R.C. continues to wreak havoc on race courses around the world. Available with your choice of damping: Yeti/I.R.C. elastomer or Risse air/oil. The A.R.C.-A.S. is easily dialed to rider weight and to course conditions, cross country and downhill alike.

YOUR VERY OWN RULER TO MEASURE UP THE COMPETITION

HIGH SCHOOL WAS NEVER THE SAME

While most companies are choosing your suspension for you, Yeti offers you the best of both worlds: two interchangeable options. The Yeti/IRC Elastomer shock utilizes a custom-formulated elastomer material that gives a wide range of damping characteristics with virtually maintenance-free action. The state-of-the-art Risse air/oil shock offers simple adjustability, light weight and race-winning performance.

When Missy's mother heard that she had been suspended, she assumed the worst.

Missy

Is from the East, didn't like school, hated studying, did things her own way and rode the Yeti/IRC elastomer suspended A.R.C. to first place in the Reebok Dual Eliminator.

MISSY "THE MISSILE" GIOVE:

Winner, 1992 Mammoth Mtn. Reebok Challenge
New course record: 5:00:42. Top Speed: 53.5 mph

JAMMIN' JIMMY DEATON:

Winner, 1992 Mammoth Mtn. Kamikazi Downhill
New course record: 4:54:20. Top Speed: 56 mph

Jimmy

Is from the West, loved school, did his homework, will try anything once and rode the Risse air/oil suspended A.R.C. to first place in the Mammoth Mountain Kamikazi Downhill.
