RIDGEBACK

1994

for the ride of your life

Freewheel magazine 1983

"The Ridgeback and similarly styled bikes are destined to establish an important new trend in cycling".

So read the words that first introduced Ridgeback to a waiting world, over a decade ago. That prophecy is now history and 10 years on,

Ridgeback continues to deliver the finest possible mountain bike performance.

Welcome to 1994 ...

● Competition Series

Truly hardcore. These aggressive off-road racers are the last word.

● Mountain Series

Serious bikes for a quick spin ... out to the Edge!

● Adventure Series

A triumph of natural selection. Lighter for a quick responsive ride.

tales of suspense

RST-460

Damping - Elastomer / polymer / spring adjustable, 1.6" travel.

Steerer / Sliders - 4130 butted Cro Mo.

Crowns: Forged aluminium.

Blades - one piece forged 6061-T6 aluminium alloy.

Brake Arch - Rigid die cast aluminium.

Available to fit 1", 1.5" and 1.75" headsets.

RST-200

Damping - Spring adjustable, 1.6" travel.

Steerer / Crown / Sliders - 4130 butted Cro Mo.

Blades - one piece forged 6061-T6 aluminium alloy.

Brake Arch - Rigid die cast aluminium.

Fits 1" diameter headsets.

Ridden exclusively by Team Ridgeback in 1993, RST Rapid Suspension Technology forks have been integral to their success, taking the bone jarring sting out of the rugged and dried out terrain that was encountered on this season's race circuits.

RST suspension provides exceptional control and handling for faster, safer descents, reduced rider fatigue and quicker times. The RST 460's resilient elastomer polymer dampers have a full 1.6" travel and feature an adjustable pre-load spring for custom tuning to suit rider weight and terrain. Working in close cooperation with Yamaha and Kawasaki, RST's designers have drawn from a vast wealth of experience, to produce a range of low maintenance, lightweight suspension forks that really perform. So if you want to be leader of the pack, fit an RST fork ... it could seriously affect the way you ride your mountain bike.

Rapid Suspension Technology forks are an option on all Competition and Mountain series Ridgebacks.

RST-156

Simplified construction rapid response suspension. Made to the same exacting standards as all RST forks.

Tremendous quality and value. Fits 1" diameter headsets.

RST-154

Same specification as RST-156 but designed for 24" wheel mountain bikes.

team tested

'93 champions

Following a highly successful season riding Competition series factory frames and RST Rapid Suspension Technology forks, Team Ridgeback members, Andrew Titley and Keeley Lockey, have qualified to compete at the world Championships in Metobief, France.

Andrew and Keeley had many memorable victories in '93, both winning the 7-Up National Points Downhill Series.

Keeley won every single race to win the Downhill Points Series and went on to become National Junior Downhill Champion at Malvern. She also took bronze in the Cross Country.

Having won the Downhill Points Series Andrew suffered a rare defeat at the Nationals but took the bronze medal as consolation. Andrew was a respectable 6th in the Cross Country.

Other team wins include, downhill victory at Nemba for first year Junior Cris Coxon and 1st place at the 7-Up finals for Senior downhill Ian Collins.

Of course the glory of winning races is not the only reason for running a mountain bike team. There's an invaluable product development benefit as well.

Testing, tweaking & more testing ...

... the process is ongoing, continuously repeated until we're satisfied that every Ridgeback frame design delivers the performance and quality of ride that excites and thrills the most demanding riders - the Team.

New frames are put through their paces, receiving the hammering of a lifetime - squeezed into just a few short hours. Feedback on key performance characteristics is immediate. And whilst the outdoor team are still taking a shower, the indoor team are hard at work with their pencils, protractors and mice, fine tuning their designs to make sure that every Ridgeback delivers the performance and quality of ride that will satisfy even the most demanding riders.

(Left to right)
Anti-corrosion
treatment,
electro static painting
and supertough
Mirrorcoat finish

in the frame

Resilient & responsive.

Tange Cro Moly tubing builds lighter, tougher, faster bikes.

Every Ridgeback frame is carefully TIG welded by hand before being painstakingly aligned to the highest tolerances.

Ridgeback frames are guaranteed for life.

**LIFETIME
GUARANTEE**

Tange Cro-Moly outer butted seat tubes save weight over lugged designs & ensure perfect seat Q/R performance time after time.

Ridgeback Comp-Lite Dropouts - Perfect alignment & optimal

chain wrap. Cold forged for strength & durability.

Low friction Snake cable guide provides improved braking response through a more direct cable routing. Cleaner top tube appearance is standard.

Protective high gloss paint finish.

Eight stage liquid anti-corrosion treatment is followed by electro-static painting & a tough polyester clear coat for a long lasting, durable finish.

8 micron thick water fix decals are so sheer, you'd think they were painted on.

The best fit for a great ride.

Every Ridgeback frame is built to a size specific Proportional Geometry design. Head and seat angles precisely recalculated for each frame size to provide 'custom fit' quality. Larger riders require a shallower seat angle to maintain correct 'knee over pedal' riding position and use a steeper head angle for sharper handling. Smaller riders need a steeper seat tube combined with a shallower head angle to achieve the same optimum pedalling efficiency. Look for Proportional Geometry.

Getting the right size Ridgeback.

To decide correct frame size - wearing regular or cycling shoes, straddle the top tube with your feet 12" apart. Aim for between 2-4" crotch clearance on a Mountain or Competition series bike and about 2-3" on an Adventure series model.

As a simple rule, the more competitive your riding style and the rougher the terrain, the more clearance you need.

the best ingredients

Comp-Lite handlebars -

Machined from 6061 T6 heat treated aluminium, the durable 170gm Comp-Lite bar provides maximum shock absorbing resilience.

Comp-Lite stems -

Thin wall heat treated Cro Moly with special short bolt ensure significant weight saving without sacrificing strength.

Pedals -

All Ridgebacks are equipped with light yet rugged aluminium or nylon cage pedals. Tough Cro-Moly axles are standard.

Ridgeback saddles -

Guaranteed comfort and performance. Designed to meet the specific requirements of Competition, Mountain and Adventure riding.

Seatpin bolts -

Ridgeback specifies lightweight high security allen key seat bolts on all models.

Spare parts service

Ridgeback bicycles are only available through authorised Ridgeback dealers. Your authorised Ridgeback dealer offers knowledgeable advice and help as well as providing first class after sales service. They also offer a unique and highly comprehensive spares service. Ridgeback policy is to hold all spares in stock.

details that count

Ritchey Quality Components

Tom Ritchey has been establishing new MTB component standards for over 10 years. His designs are his competitors goals.

Ritchey True Grips -

The racers choice for maximum comfort and control. Specially formulated low density Kraton compound absorbs vibration and actually helps your hands stick to the grips.

Ritchey Tyres -

- Maximum traction with minimum rolling resistance and weight. Painstakingly field tested by Tom & his team to ensure optimum performance & wear. Ridgeback uses two of Ritchey's most famous tyres. The Megabite Harddrive, perfect for soft, loose and rugged terrain. And the Mod Quad, a great multi terrain tyre that combines the low rolling resistance of the Quad with the off-road performance of the Megabite.

Ritchey Logic Headsets -

- Superior strength & durability with no additional weight. Oversize 3/16" bearings on bottom race increase load-bearing surface area for improved shock absorption. Top race uses smaller 1/8" balls to balance load requirements and save weight.

Ridgeback specifies Finish Line high performance Teflon grease.

- Finish Line is 100% dedicated to bicycle care. By using only the best ingredients Finish Line has built a reputation that makes it the bicycle lubrication chosen by an increasing number of teams and mechanics the world over.

FINISH LINE

- Ridgeback is the only UK brand that specifies Finish Line Pro grease. Anti rust additives and a wide temperature tolerance create a high performance grease that outlasts all others by up to three times - even under the worst off road conditions.

ride light - ride Ridgeback

SHIMANO

Every Ridgeback is equipped with the very latest Shimano componentry. Shimano's revolutionary Ride Light concept has been further developed for the '94 season resulting in enhanced performance across the whole range - light weight high precision function for a lighter more responsive ride and a lighter feeling of control.

Advanced Light Action Dual SIS

Light weight lever feel for easier operation and faster, smoother shifting, even under maximum pedal power.

Optical Gear Display

A simple and easy to read shift indicator that shows current gear position.

Ridgeback shifting has never been easier.

Shimano Optical Gear Display is now standard on all RapidFire shifters.

ride LIGHT

Shimano HyperDrive-C

Maximum performance, minimum weight and small 'compact' transmission appearance.

M-System

Powerful 'M' System brakes provide dramatic & consistent stopping power in all conditions.

Parallax hubs

Unique 'wide shell' design provides improved strength and rigidity, for faster, more resilient wheels.

Truly hardcore

competition

SERIES

Superb acceleration, great handling and stunning looks.

Super light double butted **TANGE** Cro-Moly frames are carefully welded and hand brazed before being painstakingly finished in either polished titanium or tough Mirrorcoat paint.

Top of the range XT features a super light triple butted fork while both Team bikes benefit from investment cast dropouts for best wheel alignment and optimum q/r performance.

Rugged **SHIMANO**® XT and STX componentry provides rapid fingertip shifting and powerful, consistent braking. To give you that vital edge - when split seconds count.

True running **ARAYA** rims supply the strength and durability needed in all-out competition and **RITCHEY** Megabites and **TIOGA** Psychos keep a grip on the situation, whatever the terrain.

Sleek, low profile Comp-Lite saddle combines a narrower shape for enhanced fast pedalling and a flattened seating surface for maximum comfort.

Weight saving Comp-Lite handlebar and stem

provide resilient shock absorption, and look great too!

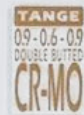

Ridgeback Competition series. Tweaked & tuned until they purr!

the best fit for a great ride

Competition: Constructed to a performance geometry design, the responsive Competition series frame uses only super light Tange and Japanese Cro-Moly tubing. Top and down tubes are specially selected short butt Tange tubes, which at their centres are an amazing 0.6mm thick. Lightweight triple butted Tange seat tube and full Cro-Moly head tube provide important strength and rigidity ensuring perfect alignment and perfect tracking.

Sizes available 16", 18" & 20"

Competition series frames feature Ridgeback's 'suspension ready' Proportional Geometry design and are manufactured to the highest standard. Like all Ridgeback frames, they're built to last, so they're guaranteed for life.

LIFETIME
GUARANTEE

mountain

SERIES

All the strength needed for real rough terrain adventures.

TANGE Cro-Moly and other lightweight materials ensure minimal weight for fast acceleration, great hill climbing and a very comfortable ride.

Ridgeback's protective high gloss paint finish is preceded by an eight stage liquid anti-corrosion treatment.

Smooth steering and low maintenance. Mountain series models feature high quality water sealed headsets packed exclusively with **FINISH LINE Pro** grease. It outlasts all others by up to three times.

Completely **SHIMANO**® equipped for maximum performance and reliability. New 'Optical Gear Display' shifters offer enhanced rider control. They're also a lot more fun.

Strong alloy wheels keep revolving weight to a minimum while **RITCHEY** Mod Quads and tenacious 'Smoke' tyres guarantee sharp handling when the going gets rough.

Anatomically designed, Ridgeback Comfort saddles offer soft cushioned support without sacrificing pedalling efficiency.

Ridgeback Mountain series. Only the strong survive.

The best fit for a great ride

Mountain: Expertly TIG welded to Ridgeback's versatile off-road geometry design, Mountain series frame is built using a variety of lightweight tubes including double-butted Cro-Moly, Midsize 31.8mm diameter tubes were chosen for their balance of rigidity, comfort and weight. A reinforced outer butted seat tube ensures faultless seat q/r performance, time after time.

Sizes available 15.5", 17.5", 19" & 20.5"

TANGE
LIGHTWEIGHT
CR-MO

Mountain series frames use Ridgeback's Proportional Geometry design. They are constructed to the highest standard and like all Ridgeback frames, they're built to last, so they're guaranteed for life.

LIFETIME
GUARANTEE

Designed for the dirt

junior mountain

SERIES

Fully charged for electrifying performance.

Constructed from light gauge Hi-Ten tubing, the Junior Mountain series Ridgebacks deliver a responsive ride and sure footed handling.

After the eight-stage liquid anti-corrosion treatment, frames receive Ridgeback's renowned high gloss paint finish to ensure these bikes can take the knocks, and look good too!

A full **SHIMANO** transmission with new 'Optical Gear Display' levers provides easy one-click shifting for razor sharp performance and control.

The Junior Mountain series Ridgebacks feature meticulous attention to detail.

Powerful cantilever brakes produce dramatic & consistent stopping in all conditions.

High quality sealed headsets are packed with **FINISH LINE** Pro grease for smooth steering and reliability.

Tough V-section 24" alloy wheels are shod with grippy 'Smoke' tyres that get the power down on even the roughest terrain.

Junior Mountain series Ridgebacks are also available with top quality RST-154 suspension forks. However, as production runs of this special bike are small, availability will be limited.

Junior Mountain series. They're rough!

The best fit for a great ride

Junior mountain. Built to a perfectly scaled down off-road geometry design, the small 13" frame has an 'extra clearance' sloping top tube to accommodate riders with an inside leg measurement of between 24 and 30 inches. Only light gauge Hi-Ten tubing is used to ensure the optimum mix of strength and comfort. Reinforced outer butted seat tube and snake cable guide are standard.

Size available 13".

Junior Mountain series frames feature Ridgeback's Proportional Geometry Design and are manufactured to the highest standard. Like all Ridgeback frames, they're built to last, so they're guaranteed for life.

A triumph of natural selection

adventure

SERIES

With a comfortable upright riding position you stay relaxed and in control.

Using **TANGE** Cro-Moly and other lightweight tubing, the sleek low weight design of the Adventure series reduces the effort needed to accelerate and climb. Successfully combining road bike performance and mountain bike durability.

Tough pearlised paint provides a beautiful high gloss finish.

High rise stem ensures maximum visibility and comfort.

Proven **SHIMANO** componentry guarantees effortlessly simple steering, shifting and braking. Optical Gear Display levers show clearly which gear you've selected.

Country trail or city street,  lightweight alloy wheels offer resilient shock absorption and long lasting reliability.

Soft foam Comfort saddle provides the broad cushioned support necessary for an upright riding position.

Ridgeback Adventure series. Fitness, fun and a whole lot more!

The best fit for a great ride

Adventure. The quick handling Adventure series frame is carefully constructed to a road-trail geometry using lightweight Hi-Ten and Tange Cro-Moly. An over butted seat tube adds strength and rigidity. Gentle curve fork tube ensures responsive, predictable steering. Forks also feature useful double mudguard eyes and the 502GS benefits from Blackburn Low Rider hoses.

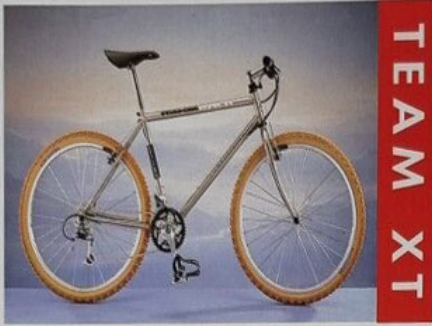

Sizes available 15", 17", 19" & 21"

TANGE
LIGHTWEIGHT
CR-MO

Adventure series frames are made to Ridgeback's Proportional Geometry design. They are built to the highest standard and like all Ridgeback frames, they're built to last, so they're guaranteed for life.
