#### FULL SUSPENSION

New for '96. Designed to accommodate today's longer travel forks. Balanced geometry suited to rough, ever-changing, cross country terrain.

#### MOUNTAIN RACERS

Proportionally longer top tubes and proportionally steeper head and seat angles for nimble handling. Shorter chainstays for hooked up climbing.

#### URBAN BIKES

Overall geometry similar to a road bike for light, lively ride. Frame materials and construction built in the durability, comfort and impact absorption of Fisher mountain machines.

#### RAKE (R):

The perpendicular distance from the centerline of the head tube to the center of the front hub. Rake combined with the head tube angle yields trail.

#### TRAIL (T):

This measurement affects the stability of the steering system and the feel of the steering. Longer trail means a heavier or more stable feel; less trail means easier steering and more sensitive handling.
