HEADSETS

Chris King Headsets—they have set the industry standard for over 20 years, and, although others have tried to imitate, they are still the best. Our unique, serviceable, cartridge bearings far outlast other bearings and provide easy access for cleaning and regreasing. Choose from NoThreadSet™, GripNut™, or TwoNut™ attachment systems. Chris King Headsets are unparalleled in performance and durability, and are backed by a 5-year warranty.

Because the system is modular, switching attachment methods can be accomplished with a conversion kit. Now change forks and stems without buying a new headset. An extra crown race allows alternating forks with little effort. Conversion kits are available to fit all existing Chris King headsets in all attachment methods.

 nothreadset™ kit

 gripnut™ kit

 twonut™ kit

DREADSET**nothread style**

Chris King NoThreadSet™: for use with threadless steering systems. Adjusts with one 5mm box wrench.

**TI-HEADSET****gripnut™ style**

Chris King GripNut™ Headset: for use with threaded steerer tubes. The unique three piece design has a clamping action that allows it to stay tight even on undersize threads.

**HEADSET****twonut™ style**

Chris King TwoNut™ Headset: for use with threaded steerer tubes. This traditional lock and adjusting nut style is still available for use when a spacer or cable banger/guide will be necessary.

first precision sealed bearing bead circa 1976

HUBSETS

Extensive research and over four years of development have gone into the design of our hubs. It wasn't our primary intention to make them lightweight, but even after making them meet extremely high load and durability requirements, they offer the most competitive weights in the industry.

Our different models have been designed to meet the needs of mountain, road, BMX, trials, and tandem applications. Each has features that define the cutting edge of the sport. Like our headsets, they are backed by our industry leading 5-year warranty.

All our hubs incorporate our unique, user-serviceable sealed bearings, oversize axles, canted flanges, and user-adjustable bearing preload. Disassembly and bearing adjustment are easily accomplished with two 5mm hex wrenches (BMX: one 3/32" hex wrench).

Colors: Black, Silver, Red, Turquoise, Purple, Green and Gold.

TOOLS

New for 1997 is an expanded line of hub tools. In addition to our hub cone adjusting tool, we now offer a tool set designed for the complete service and disassembly of our front and rear hubs. It allows removal and replacement of all bearings in the hubs, and access to the internal RingDrive™ mechanism on the rear models. It comes packaged complete including thorough instructions.

Complementing our Headset installation tools is a new set of reaming and facing cutters designed to hold the same exacting tolerances as our headsets. The cutters are made from M42-Hss-Co — the material needed to cut today's exotic metal frames. Get the maximum performance out of your headset with a properly prepared frame. Models available to fit Park, Campagnolo, and Var.
