LIFE

Riding has the power to transform, humble, and lend perspective to life. It has the power to strip us away from the madness that grips our world and give us moments of solitude to reflect on bigger issues—or nothing at all.

In the bike-centric world of Yeti, we view success a little differently than the rest of the world. Success is feeling faster than yesterday, hurting a little less, and having your friends not have to wait up. It's about the clarity that comes from detachment, from transforming conscious moves into instinctive ones. It's about letting your mind separate from your body long enough so things fit together better when the ride is over. It's about the no-dab ride, riding the perfect race, striving to be the best, and celebrating your victories. When you ride, you learn that success is measured a moment at a time, and the real trick is to use the right tools to create and sustain those moments at will.

That's why we build what we build. Life looks different when your obstacle is real and immediate—a log, a switchback, a rock drop... these challenges are tangible and relevant. Clear that log, nail that switchback, sky off that rock drop, and see how it affects your life. That love of the ride is part of what makes Yeti owners a tribe. Go ride. We'll see you out there.

Making bikes is a labor of love. At Yeti, it's a labor of obsession. It's about Roberto Vega burning masterful welds onto our race-proven frames. And when our racers win, or our mechanic figures out some way to make our bikes go faster, everyone at Yeti celebrates. It reminds us that great mountain bikes are much more than tubes, geometry and engineering. Great mountain bikes come from dedication, racing and fanatically loyal employees that demand the best.

The Yeti tribe is a diverse group of freaks with a common passion – they love to ride. They come from all walks of life and from different parts of the world. Many have visited our factory and seen Vega's deft hands lay down perfect welds. Some have come to our truck at the races and met the racers and mechanics. Others don't know us, but smile when people on the trail notice their frame. They are who we are.

DH-9

UNIQUE ECCENTRIC SHOCK MOUNT
ALLOWS A WIDE RANGE OF SETUP
AND ADJUSTMENT

OVERSIZED 20MM THRU-AXLE REAR
INCREASES STRENGTH AND STIFFNESS

SUPER-STRONG MONOCOQUE
CONSTRUCTION

IMAGE: PROTOTYPE TEAM DRAPRIES NOT AVAILABLE

DH-9 2003

The DH-9 has nearly 9 inches of rear travel and a massively strong frame, making it the ideal DH race bike. But the real secret of the DH-9 lies in the patented Lawwill rear suspension, which allows the rear wheel to travel in a vertical path and isolates the suspension from pedaling forces. This rare combination of plush travel and efficient pedaling has made the DH-9 one of the most successful bikes on race circuits around the world.

AS-X 2303

Strength and travel are king here. Our exclusive Yeti/Easton R.A.D. tube set has been specially designed for big hit riding. The Active Suspension design and Progressive 5th Element shock allow an amazing amount of adjustment and tuning, and the OnePointFive head design adds maximum strength and steering precision. Our unique head tube design can also fit standard 1-1/8" forks.

AS-R SL-2003

Born and bred on the race circuit, the all-new AS-R has been radically refined. Everything has been CAD-optimized: a new machined top tube knuckle (saves 50g), new Yeti/Easton custom tubing (saves 100g), TiFlex pivot and new dropouts (saves 100g)... for an amazing frame weight (including rear shock) of 5.1 pounds. And still with the same plush (3.7") travel to handle anything from the roughest XC race courses to the ultimate Colorado singletrack.

ARC 2003

The racing standard for over ten years. Its longer top tube, high-speed stability and light weight have made it the choice of champions and weekend racers all over the world. But rather than let the ARC rest on its laurels, we've improved it with the latest in tubing developments from Easton, and new geometry that covers a greater frame size range, now including extra-small.

All frames are available separately except the FRO.

Although we've developed frame sizes to fit just about everyone, we know there are a few of you out there who really need a custom frame for the perfect Yeti ride. Custom-geometry frames are available through Yeti Special Projects for the AS-R and ARC models. Contact an authorized Yeti dealer for details.

GEOMETRY

From the Racing minds at Yeti. The philosophy is simple: Lighter, Stronger, Faster, Better. No frills, no excess, no excuses. Each one of our components is designed for a specific function and purpose. We apply our intuition and race knowledge to making you go faster, one part at a time.

<p>ARC RI SL</p> <p>With the advent of new composite materials, we're able to offer a rise bar that gives upright positioning and more comfortable handling characteristics at a fraction of the weight.</p>		<p>TECH Specs: Carbon, 7 degree sweep, 4 degree upsweep, 1" rise Color: Black Size: 620 mm Weight: 135g</p>
<p>ARC FI</p> <p>In cross-country racing, weight is everything. Our carbon composite bars are super-tough, yet weigh only 120 grams.</p>		<p>TECH Specs: Carbon, 5 degree sweep Color: Black Size: 580 mm Weight: 120g</p>
<p>ARC R2</p> <p>Wider bars with a slight rise for more comfort and increased control in fast sections. We're big fans of riser bars in competition. Just don't put bar ends on them.</p>		<p>TECH Specs: 7075, 7 degree sweep, 4 degree upsweep, 1" rise, anodized Color: Black Size: 620 mm Weight: 200g</p>

	<p>ARC SL CARBON</p> <p>Our lightweight post is even better in carbon fiber. Super light and strong... the ultimate upgrade.</p> <p>TECH Specs: Single bolt for adjustment of fore/aft and tilt, patent pending Color: Carbon Weave Size: 27.2 (Ø), 350mm Weight: 155g</p>		<p>XC SEAT POST</p> <p>Minimalist by design, the ARC seatpost allows for one-bolt adjustment of fore-aft and saddle tilt. The Wedge Lock clamping keeps the seat secure in all conditions.</p> <p>TECH Specs: Single bolt for adjustment of fore/aft and tilt, patent pending Color: Black Size: 25.8, 27.0, 27.2 (Ø/50mm) Weight: 235g</p>		<p>XC STEM</p> <p>Cross-country race stems need to be lightweight and stiff. Our stem design has an oversized cross-section to make sure that it doesn't flex under extreme conditions. This ensures precision turns and better control.</p> <p>TECH Specs: 6061, Single bolt rear, hinged face plate, laser etch logo, 5 degree rise Color: Black Size: 100, 110, 120, 130 Weight: 200g</p>
